## **It's Interventional' s Carbon Reduction Plan 2023/2024**

It's Interventional is committed to reducing our Carbon Footprint by January 2030 and achieving Net Zero emissions by 2040, which will run in line with the NHS.

We have held the Environmental Management System of ISO14001:2015 for 13 years and have been producing Carbon footprints since. The ISO helps us to identify, implement and measure environmentally responsible practices and procedures, which helps us reduce the overall impact of the company on the environment.

As part of our ISO14001:2015 and reducing the impact It's Interventional has on the environment, we have already taken steps to reduce our operational emissions and since 2019 the below have been implemented:

- LED office lighting installed.
- Sensor lighting installed in warehouse.
- X5 Electric car charging ports installed in the car park.
- Installed x2 Bee hives within our car park.
- Gone 100% recycled packaging – removed plastic.
- Installed x3 new boilers.
- Installed a new ERP system – to reduce paper usage.

We will maintain an effective system of sustainable actions with respect to the environment, wherever it is practical and reasonable to do so. We will work to ensure that environmental issues are integrated into all relevant decision-making.

We are committed to continually improving our environmental system, its performance, and to the prevention of pollution as a business. This can be achieved by a combination of improved working practices, greater awareness, staff involvement, and an on-going commitment to improvement within the business and the wider community.

We will continue to monitor and measure our impact, and implement further measures such as:

- Carbon offsetting.
- Attaining carbon neutral status.
- Reduce the fleet to electric vehicles only.
- Produce data and report on scope 3.

### Baseline Emissions Footprint

It's Interventional are using reporting year 2019 as the baseline for reporting our emissions.

Carbon footprint is expressed as Co2e – carbon dioxide.

It's Interventional reported against Scope 1 & Scope 2 only during our base year of 2019. Scope 3 was not part of our SME reporting during 2019.

Baseline Year: 2019	
Additional Details relating to the Baseline Emissions calculations.	
It's Interventional started to produce a carbon footprint in 2008 as part of our ISO 14001:2015. Since this time, we have actively changed our reporting & what is included based on what the requirements of the NHS & Government. We are a SME with 30 staff members, of which 22 staff are based in the office. Our reporting figures reflect the size of the business. The reporting is for Scope 1 & 2 only. Carbon intensity for 2019 (tonnes CO2 / employees) 2.0.	
Baseline year emissions:	
EMISSIONS	TOTAL tonnes of CO2e
Scope 1	19.1
Scope 2	38.2
Scope 3	N/A Baseline year
Total Emissions	58.4 CO2e

### Current Emissions Reporting

Our current reporting year is 2023. This is based on data & bills received from services. This data will not provide a true picture until a few years of reporting against scope 1 & 2 can be reviewed for accuracy. For future reporting years we will include scope 3 and will include at a minimum the 5 required scope 3 categories:

1. Upstream Transport & distribution
2. Waste generated in operations
3. Business travel
4. Employee commuting
5. Downstream transport & distribution

Reporting Year: 2023	
EMISSIONS	TOTAL (tCO2e)
Scope 1	12.2
Scope 2	136.8
Scope 3 (Included Sources: Upstream Transport & distribution / Waste generated in operations / Business travel / Employee commuting / Downstream transport & distribution)	N/A Not yet reporting on scope 3
Total Emissions	149.1
Carbon Intensity (tCO2e / employees	4.4

### Our reduction targets & progress

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

1. Maintain the purchase and use of 100% recyclable packaging.
2. By 2030, we aim to transition the majority of the sales team & company vehicles to zero emissions Hybrid's or electric.
3. Reduce emissions throughout our supply chain – work with manufacturers, couriers etc to review packaging, single use plastic and transport.
4. To offset carbon emissions from 2023 onwards.

We are aiming for our carbon emissions to decrease over the next six years in line for the 2030 target.

### **Completed Carbon Reduction Initiatives**

The environmental management measures, projects, and completed or implemented actions since the 2019 baseline have seen the carbon emissions reduce by these schemes, and the impact equates to 32.9 tCO<sub>2</sub>e, a 43% reduction against the 2019 baseline. The current measures and new actions will be in effect when performing future contracts and business.

### **Declaration and Sign Off**

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, along with the future requirement of Scope 3 emissions. These have / will be reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.

This Carbon Reduction Plan was reviewed by the Senior Management and signed off by our Managing Director.

Signed on behalf of It's Interventional:

Mr Ian Aaron - Managing Director

Date: 10<sup>th</sup> May 2024
